CUSTOM TURNKEY ASIC SOLUTIONS FOR THE HEALTHCARE MARKET

Leveraging 20+ years of experience in analog, digital, RF, mixed-signal IC design, and ASIC supply to meet the unique demands of the medical industry

22
YEARS OF
EXPERIENCE

The healthcare and medical electronics space demands cutting-edge innovation and high-quality products to maintain a competitive edge. Developing successful medical systems for complex applications takes deep domain expertise and a rigorous, proven approach to quality.

Cyient brings a breadth and depth of experience to take on the most challenging projects in implants, diagnostics, imaging, sequencing, lab on chip, and medical patches. Our proven capabilities allow us to deliver complete projects on time and without cost overruns—from proof of concept design, ASIC design, lab validation, and industrialization to high-volume production and supply.

Our expertise in the healthcare sector and custom turnkey ASICs allow us to provide solutions that:

Enables superior technical performance

Reduces bill of materials

Ensures product differentiation

Establishes a secure and reliable supply

Protects your IP

Delivers quality standards in compliance with ISO13485:2016

Offers products with FDA and CE-marked certification

**INNOVATION
ON CHIP**

Healthcare ASIC Success Stories

Battery-less wireless sensor ASIC to diagnose glaucoma

Three generations of ultra-low power FM receiver ICs for hearing aids

Wireless people location and alarm system for hospitals and care centers

A power management system for cochlear hearing implants

“ The partnership strengthened our own ASIC capabilities. Delivering working silicon requires close collaboration and team work. We succeeded despite the geographical separation. ”

- Manager Enabling Technologies & Tech Development, Cochlear

“ Going beyond the state-of-the-art in low-power, low-voltage RF circuit design requires a very skilled and open-minded development team. Intense collaboration, skill, and engagement between our teams were instrumental in achieving the desired results. ”

- Head of R&D Department, PHONAK

From prototype to high-volume production and supply

We shorten the time between the arrival of engineering silicon prototypes and initiating lab validation to as little as a few hours by using our own wire bonder for quick assembly of prototypes.

Wire Bonder

Additionally, two production test platforms enable our teams to develop and release production software quickly, further reducing the processing time from prototyping to production. By enabling robust collaboration between ASIC design and production test teams, we can optimize the turnaround time for analog models. This is a significant value add over pure IC design or production supply chain companies and has helped us produce successful ASICs for more than two decades.

Handler

After the ASICs are developed to the desired MSL level, they are once again placed in the tray or on tape and reel for shipment to the customer.

Production tester -
National Instruments STS

This process enables us to rapidly execute the industrialization phase, launch ASIC production, and ship medium volumes of the product. For processing high volumes, the production test is transferred to an OSAT, streamlining logistics by ensuring that assembly and testing are done at the same facility.

Production testers (2x) -
Advantest V93000

Laser Marker

Tape and Reel Machine

Our technical expertise for the healthcare market

Inductive wireless power transfer

Wireless communication for voice and data transfer

MEMS and sensor signal conditioning for patient monitoring

High voltage, low power drivers for electrical stimulation

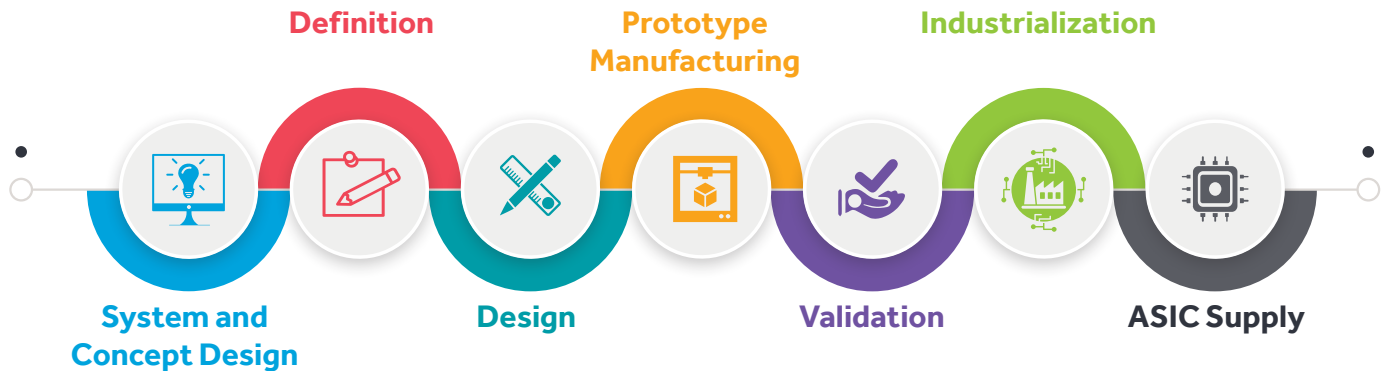

Embedded power management and battery chargers

Ultra-thin (wafer level) and MCM packaging solutions

ASIC solution development framework

The Cyient Advantage

- Analog, digital, RF, and mixed-signal ASIC solutions backed by 20+ years of experience
- 600+ proven IPs in the database
- ARM approved design partner
- TSMC design center alliance partner
- ISO9001, ISO13485 certified
- In-house industrialization (prototype, assembly, ATE platforms, tape and reel)
- High-volume production experience
- Tight-quality assurance system
- Proven, high-quality supply chain partners (foundries and OSAT)
- Proven first-time functional design record
- 300+ ASIC tapeouts experience

About Cyient

Cyient (Estd: 1991, NSE: CYIENT) is a global engineering and technology solutions company.

As a Design, Build, and Maintain partner for leading organizations worldwide, we take solution ownership across the value chain to help customers focus on their core, innovate, and stay ahead of the curve. We leverage digital technologies, advanced analytics capabilities, and our domain knowledge and technical expertise, to solve complex business problems.

We partner with customers to operate as part of their extended team in ways that best suit their organization's culture and requirements.

Our industry focus includes aerospace and defense, healthcare, telecommunications, rail transportation, semiconductor, geospatial, industrial, and energy.
